

The Yaesu VX-5R belt clip solution.

Assembly Instructions:

What you will need: The VX CLIP adapter was designed to work with the Belkin "E" Series Swivel Belt Clip or a similar clip. These are available at Wal-Mart and other fine purveyors of Chinese plastic products. You will also need a small Phillips screwdriver.

Assembly:

- (1.) Remove the self tapping screw and star washer from the aluminum VX CLIP adapter..
- (2.) Peel the sticky tape from the back of the Belkin button.
- (3.) Insert the self tapping screw in the button. **DO NOT** use the star washer, it is used later.
- (4.) Carefully start the screw in the adapter while holding the button so it can't stick yet.
- (5.) Once the screw is started, square up the button base and stick it to the adapter.
- (6.) Tighten the self tapping screw with care. The button is now mounted.
- (7.) Remove the plastic belt clip from the VX-5R. Save that screw!
- (8.) If desired, slip the wrist strap in the groove in the adapter that goes around the top screw hole.
- (9.) Place the star washer on the Yaesu belt clip screw.
- (10.) Place the screw through the top hole in the adapter and mount to the radio.
- (11.) Tighten the screw with care while making sure the steel pins are seated in the small dimples on the radio case.

You can now use your VX-5R with a modern belt clip while it is inside the protective leather case!
